

# Migration from v3.0 to v4.0

Following changes must be done to migrate from v3.0 to v4.0

## Parameter change in all queries

### Request

Typechange of parameter:

`statuses`: change from `array` (`[1,2,3]`) to `comma-separated list` (`1,2,3`)

## New request /order/{orderHash} added

Get order by the specified order hash

## LimitOrder Request Data changed

### Request

Removing of parameter:

`allowedSender`

`offsets`

`interactions`

Adding of parameter:

`extension`: An interaction call data. ABI encoded set of `makerAssetSuffix`, `takerAssetSuffix`, `makingAmountGetter`, `takingAmountGetter`, `predicate`, `permit`, `preInteraction`, `postInteraction`. If `extension` exists then lowest 160 bits of the order salt must be equal to the lowest 160 bits of the extension hash

`makerTraits`: Includes some flags like, allow multiple fills, is partial fill allowed or not, price improvement, nonce, deadline etc.

### Response

Removing of parameter:

`allowedSender`

`offsets`

`interactions`

Adding of parameter:

`extension`: An interaction call data. ABI encoded set of `makerAssetSuffix`, `takerAssetSuffix`, `makingAmountGetter`, `takingAmountGetter`, `predicate`, `permit`, `preInteraction`, `postInteraction`. If `extension` exists then lowest 160 bits of the order salt must be equal to the lowest 160 bits of the `extension` hash

`makerTraits`: Includes some flags like, allow multiple fills, is partial fill allowed or not, price improvement, nonce, deadline etc.
